

Hamad Moiz Chodhry

SOC Analyst | AI Security Engineer | Detection Engineer

Phone: +92-308-4268511 Email: hamadmoizchodhry@gmail.com LinkedIn: linkedin.com/in/hamad-moiz Location: Pakistan | Remote | Open to UAE / EU / USA

Professional Summary

Cybersecurity professional with hands-on SOC operations, threat detection, incident response, and AI-driven security automation experience. Proficient in SIEM platforms (Wazuh, ELK Stack, IBM QRadar, FortiSIEM, Splunk), EDR/XDR (CrowdStrike, SentinelOne), IDS/IPS (Suricata, Snort, Zeek), and SOAR (FortiSOAR, TheHive, Cortex). Architected **AetherGuard** — an autonomous, multi-agent AI SIEM leveraging **Claude API**, **Model Context Protocol (MCP)**, and LLM reasoning to automate Tier-1 alert triage, threat hunting, and detection rule generation, reducing MTTR by up to 90%. Strong foundation in MITRE ATT&CK, NIST CSF, and purple team operations. ISC2-Certified | 3.86 GPA B.S. Cybersecurity (Air University) | Fortinet NSE Certified | CEH In Progress.

Technical Skills

SIEM & SOC:	Wazuh, IBM QRadar, ELK Stack (Elasticsearch/Logstash/Kibana), FortiSIEM, Splunk — rule tuning, log onboarding, alert triage, threat correlation, custom decoder development
AI & Automation:	AI-Powered SIEM (AetherGuard), Claude API, OpenAI API, Model Context Protocol (MCP), LLM Security, Python, Bash, PowerShell — automated alert triage, anomaly correlation, workflow automation
SOAR & IR:	FortiSOAR, TheHive, Cortex, MISP, Shuffle — playbook automation, incident triage, RCA documentation, case management, IOC enrichment
EDR / XDR:	CrowdStrike EDR, SentinelOne, FortiXDR — behavioral analysis, threat containment, endpoint telemetry, malware triage
IDS / IPS:	Suricata, Snort, Zeek — rule authoring, signature tuning, network traffic analysis, C2 beaconing detection, protocol anomaly detection
Threat Intel:	IOC correlation, CVE analysis, OSINT (Shodan, Maltego), MISP, threat actor profiling, attack surface management
Frameworks:	MITRE ATT&CK, NIST CSF, Cyber Kill Chain — detection engineering, playbook design, purple team collaboration
Network & FW:	FortiGate (NSE Certified), pfSense — policy hardening, segmentation, perimeter defence, VPN, access control
Active Directory:	GPO security baselines, AD hardening, privileged access monitoring, Kerberoasting detection, Pass-the-Hash detection
Compliance:	ISO 27001, SOC 2 Type I & II, NIST CSF, PCI-DSS — audit support, evidence collection, gap analysis

Professional Experience

SOC Analyst & AI Security Engineer | *SecureQuanta*
Ottawa, Canada (Remote)

Jan 2025 – Present

- Architected and deployed **AetherGuard** — an autonomous, multi-agent AI-powered SIEM using **Claude API** and **Model Context Protocol (MCP)** to automate 90% of Tier-1 alert triage, reducing investigation time from 20–40 minutes to under 5 minutes per alert.
- Designed a **multi-agent SOC architecture** comprising specialized AI agents (Investigator, Collector, Rule Creator, Threat Publisher) that collaborate autonomously across SIEM, SOAR, threat intelligence, and case management platforms without static playbooks.
- Integrated MCP server as a universal bridge between LLMs and enterprise SOC tools (Wazuh, ELK Stack, TheHive, MISP), enabling structured LLM-callable functions for log queries, IOC enrichment, and case creation — eliminating custom per-tool integrations.
- Implemented **closed-loop defense automation**: upon confirmed threat detection, AI agents autonomously generate and deploy new Sigma/SIEM detection rules, update MISP IOC feeds, and create TheHive investigation cases — achieving continuous self-hardening.
- Executed continuous **security monitoring and alert triage** across SIEM and EDR platforms; reduced MTTR through automated correlation rules and behavioral analysis aligned with **MITRE ATT&CK** and **NIST CSF** frameworks.
- Deployed and tuned **Suricata IDS/IPS** rules to detect port scans, brute-force attempts, lateral movement, and C2 beaconing; integrated detection workflows directly with FortiSIEM alert pipelines.

- Implemented **ransomware containment** via Wazuh Active Response — automated file quarantine and process kill scripts triggered by behavioral indicators, significantly reducing MTTR.
- Monitored and triaged alerts across **Wazuh** and **ELK Stack**; performed log analysis, IOC correlation, and incident escalation per SOC playbooks.
- Configured **Active Directory** and GPO security baselines; detected credential-based attacks including **Kerberoasting** and **Pass-the-Hash** through authentication log analysis.
- Participated in **purple team exercises** — collaborated with offensive team to improve alerting, detection use cases, and IR playbooks based on simulated adversarial scenarios.
- Performed **OSINT reconnaissance** and attack surface mapping using Shodan and Maltego to proactively identify exposed assets, leaked credentials, and third-party risk.

Network Security Analyst | *VentureDive*

Aug 2024 – Sep 2024

Lahore, Pakistan

- Assessed and hardened enterprise network perimeter; identified critical misconfigurations in **FortiGate** firewall policies and implemented corrective segmentation and access control rules.
- Integrated **FortiGate** with **Wazuh SIEM** via custom decoders and correlation rules, improving real-time threat visibility and enabling automated alerting across network segments.
- Investigated endpoint security incidents using **CrowdStrike EDR**; traced attack vectors and produced Root Cause Analysis (RCA) documentation for remediation teams.

Key Projects

AetherGuard — Autonomous SOC with Agentic AI & Model Context Protocol

FYP | Air University, 2025

- Designed and built a next-generation autonomous SOC platform using **agentic AI** (Claude 3.5 Sonnet, GPT-4o) and a custom **MCP Server (TypeScript/Python)** as the universal bridge between LLMs and security tools.
- Implemented four specialized AI agents: **Investigator** (lead analyst & orchestrator), **Collector** (forensic log retrieval via MCP tools), **Rule Creator** (Sigma/SIEM rule generation from confirmed incidents), and **Threat Publisher** (automated IOC updates to MISP & SIEM threat lists).
- Leveraged Claude's **200K token context window** to deep-read entire investigation logs, PCAP summaries, and threat feeds within a single prompt — overcoming fragmented context limitations of traditional SOAR.
- Integrated technology stack: **Wazuh** (SIEM/XDR), **OpenSearch/Elasticsearch** (data lake), **MISP** (threat intel), **TheHive** (case management), **Shuffle/n8n** (workflow automation), **PostgreSQL/SQLite** (rule/IOC storage).
- Demonstrated 90% MTTR reduction in simulated SOC environment; 100% alert coverage with automated Markdown audit trails and compliance documentation.

LLM Guard — Prompt Injection Detection System

- Developed a real-time **latent-based classifier** to detect and block prompt injection and jailbreak attempts against LLM-powered applications — applied security research in emerging AI attack surfaces.

Automated Threat Detection Pipeline

- Built end-to-end automated detection and response system integrating **Wazuh**, **Cortex**, **MISP**, and **TheHive**; reduced MTTR through automated alert enrichment and case creation with full IOC lifecycle management.

Education

Bachelor of Science in Cybersecurity | *Air University, Multan, Pakistan*

Sep 2022 – Sep 2026 (Expected)

- **GPA: 3.86 / 4.0** | **Vice President**, Air University Cyber Security Society (Oct 2025 – Present)

Certifications

- ISC2 Certified in Cybersecurity (CC)
- Fortinet Certified Associate — Cybersecurity
- FortiGate 7.6 Operator (NSE)
- Certified Red Team Analyst (CRTA)
- Ethical Hacking Essentials (EHE) — EC-Council
- Certified Ethical Hacker (CEH) — *In Progress*
- Introduction to Cybersecurity — Cisco
- External Attack Surface with Azure
