

Hamad Moiz Chodhry

Red Team Analyst | Penetration Tester | Offensive Security

☎ +92-308-4268511 ✉ hamadmoizchodhry@gmail.com 🔗 linkedin.com/in/hamad-moiz 📍 Lahore, PK |
Remote-First | UAE / USA / Europe

Professional Summary

Offensive security professional with hands-on experience conducting end-to-end penetration tests across Active Directory environments, enterprise networks, and web applications. Expert in manual exploitation – privilege escalation chains, AD attack paths (Kerberoasting, AS-REP Roasting, Pass-the-Hash), OWASP Top 10 web flaws, and lateral movement – without relying solely on automated scanners. Engineered an autonomous AI penetration testing agent (Claude API, OpenAI API, MCP) integrated with Nmap, Metasploit, and Burp Suite – enabling human-supervised, scalable end-to-end exploitation workflows. **CRTA | ISC2 CC | 3.86 GPA | CEH In Progress.** Experienced operating fully remote with international client stakeholders across multiple time zones.

Offensive Security Competencies

- **Active Directory Attacks:** Kerberoasting, AS-REP Roasting, Pass-the-Hash, Pass-the-Ticket, BloodHound path analysis, Domain Admin compromise, DCSync, Silver/Golden Ticket
- **Network Pentesting:** Nmap, Wireshark, Netcat – port scanning, service enumeration, protocol abuse (SMB, FTP, SSH, RDP), VLAN hopping, firewall evasion, network segmentation testing
- **Web Application Pentesting:** Burp Suite Pro, SQLmap – full OWASP Top 10: SQLi, XSS, CSRF, IDOR, LFI/RFI, authentication bypass, business logic flaws, JWT attacks
- **Exploit Tooling:** Metasploit, Impacket, Mimikatz, CrackMapExec, PowerView, PowerUp, John the Ripper, Hashcat, Responder, Evil-WinRM
- **Recon & OSINT:** Shodan, theHarvester, Maltego – attack surface mapping, credential leak identification, passive/active recon, third-party risk analysis
- **AI & Automation:** Autonomous VAPT agent (Claude API, OpenAI API, MCP), Python, Bash, PowerShell – automated exploitation pipelines, custom scanning integrations
- **VAPT Reporting:** Technical VAPT reports, CVSS ratings, executive summaries, MITRE ATT&CK mapping, Cyber Kill Chain, remediation briefings for international stakeholders
- **Purple Teaming:** Suricata, Wazuh, ELK Stack – attack simulation, detection use case development, SOC playbook improvement, alerting validation

Professional Experience

Red Team Analyst & Junior Penetration Tester

SecureQuanta

Jan 2025 – Present

Ottawa, Canada (Remote)

- Conducted end-to-end penetration tests across internal networks, web applications, and Active Directory environments – identifying and exploiting 20+ critical vulnerabilities per engagement cycle.
- Executed full AD attack chains: Kerberoasting, AS-REP Roasting, Pass-the-Hash, credential dumping via PowerView, Mimikatz, and Impacket; achieved Domain Admin through lateral movement in multiple client engagements.
- Performed manual web application assessments across full OWASP Top 10 – SQL Injection (blind/error-based), Stored/Reflected XSS, CSRF, IDOR, File Inclusion, and Broken Authentication across diverse web stacks.
- Conducted network penetration tests including port scanning, service enumeration, protocol abuse (SMB, FTP, SSH, RDP), and firewall evasion to map complete attack surfaces.
- Engineered an autonomous AI penetration testing agent (Claude API, OpenAI API, MCP) integrated with Nmap, Metasploit, and Burp Suite – enabling human-supervised, scalable end-to-end exploitation workflows that significantly cut manual triage time.
- Performed OSINT reconnaissance and attack surface mapping prior to active testing – identified exposed assets, leaked credentials, and misconfigurations for 100% pre-engagement coverage.
- Delivered detailed VAPT reports with CVSS severity ratings, exploitation evidence, and prioritized remediation strategies; presented findings to international stakeholders translating technical risk into business impact.
- Participated in purple team exercises – simulated MITRE ATT&CK techniques and collaborated with SOC teams to improve alerting, detection use cases, and incident response playbooks.

Network Security Analyst

VentureDive

Aug 2024 – Sep 2024

Lahore, Pakistan

- Assessed enterprise network perimeter – identified critical misconfigurations in FortiGate firewall policies and implemented corrective segmentation, directly informing remediation gap analysis.
- Investigated endpoint security incidents using CrowdStrike EDR, tracing attack vectors and producing Root Cause Analysis (RCA) documentation for remediation teams.

Penetration Testing Projects

Autonomous AI Penetration Testing Agent

- Engineered a fully automated VAPT pipeline (Claude API, OpenAI API, MCP) integrated with Nmap, Metasploit, and Burp Suite. Agent autonomously scans targets, identifies exploitable vulnerabilities, selects attack vectors, and requests operator approval before each kill chain phase – enabling scalable, human-supervised end-to-end exploitation.

Active Directory Red Team Lab – Full Domain Compromise

- Multi-phase AD attack simulation: initial foothold, internal enumeration (PowerView, BloodHound), Kerberoasting, AS-REP Roasting, Pass-the-Hash, lateral movement, and Domain Admin compromise. Full attack chain documented with MITRE ATT&CK technique mappings and remediation recommendations.

Web Application Penetration Test – DVWA (Full VAPT Engagement)

- Complete manual web assessment targeting all OWASP Top 10: SQL Injection (blind/error-based), Stored/Reflected XSS, CSRF, LFI/RFI, and Command Injection. Each finding documented with Proof-of-Concept (PoC) exploits and CVSS scores. Integrated Wazuh/Suricata for detection validation – achieved 95% threat detection accuracy.

Advanced Network Penetration & Segmentation Assessment

- Designed and attacked a multi-segment enterprise network (pfSense, Security Onion, honeypots) – tested for VLAN hopping, firewall rule bypass, and lateral movement paths. All findings mapped to Cyber Kill Chain phases for remediation gap analysis.

LLM Guard – Prompt Injection Detection System

- Developed a real-time latent-based classifier to detect and block prompt injection and jailbreak attempts against LLM-powered applications – demonstrating applied vulnerability research in emerging AI attack surfaces.

Education

Bachelor of Science in Cybersecurity

Air University

Sep 2022 – Sep 2026 (Expected)

Multan, Pakistan

- GPA: **3.86 / 4.0**
- Vice President, Air University Cyber Security Society (Oct 2025 – Present)

Certifications

- **Certified Red Team Analyst (CRTA)**
- **ISC2 Certified in Cybersecurity (CC)**
- **Fortinet Certified Associate – Cybersecurity**
- **FortiGate 7.6 Operator (NSE)**
- **Ethical Hacking Essentials (EHE)** – EC-Council
- **Certified Ethical Hacker (CEH)** – In Progress
- **External Attack Surface with Azure**
- **Fundamentals of Dark Web**
